**Subject:** Election Data

**Importance:** High

Hi!

My name is Lili Gonzalez and I am an Anaheim Hills resident, and current senior student at Baylor University in Waco, Texas. I am emailing to see if I can obtain some basic election data for a term paper. I am in a Campaigns & Elections class this semester and part of our assignment is to create a regression analysis for elections in an area of our choosing. My focus is on the city of Anaheim, and specifically city council elections prior to 2016.

The specific data I am looking to obtain is the party identification of the member-at-large candidate who won, along with the percentage of votes from Democrats and Republicans for that candidate. I also need a data set of at least 50, so I am unsure as to how far back that information would go to account for 50 winning candidates.

Please let me know if this information is attainable, and if I need to do anything else on my end. I greatly appreciate any help you can offer!

Thank you and have a great rest of your week!

**Lili Gonzalez**
